Psychology

Programme of Study: Key Stage 5

Statement of intent

The psychology department strives to offer an engaging and effective introduction to psychology. Students will learn the fundamentals of the subject and develop relevant skills valued by higher education and employers, including critical analysis, independent thinking and research.

This qualification appeals to a cross-section of students, regardless of whether they have studied the subject before. It builds on skills developed in the sciences and humanities and enables progression into a wide range of other subjects.

Students will be expected to:

- demonstrate knowledge and understanding of psychological concepts, theories, research studies, research methods and ethical issues in relation to the specified Paper 1 content
- apply psychological knowledge and understanding of the specified Paper 1 content in a range of contexts
- analyse, interpret and evaluate psychological concepts, theories, research studies and research methods in relation to the specified Paper 1 content
- evaluate therapies and treatments including in terms of their appropriateness and effectiveness.

Knowledge and understanding of research methods, practical research skills and mathematical skills will be assessed in Paper 1. These skills should be developed through study of the specification content and through ethical practical research activities, involving:

- designing research
- conducting research
- analysing and interpreting data.

In carrying out practical research activities, students will manage associated risks and use information and communication technology (ICT).

Key Concepts

AO1 – demonstrating knowledge and understanding	AO2 – applying knowledge and understanding	AO3 – analysis, interpretation and evaluation
Students will be able to demonstrate their knowledge and understanding of science, its processes, techniques and procedures. Students will be able to recall and describe their psychological knowledge such as theories, studies and methods	Students will be required to apply their knowledge and understanding of science, its processes, techniques and procedures. Students will need to apply their knowledge to the different situations or contexts. This could be a made-up example, a practical situation, a situation with qualitative data or a situation with quantitative data	Students will be required to analyse, interpret and evaluate scientific information, ideas or evidence. This may be a theory or they may be asked to draw conclusions from the results of an experiment. Students could also be required to give suggestions on how to improve a study or make it better. Students will also be required to demonstrate their ability to design psychological procedures.

Key Themes

Researcher	Research methods	Strengths	Limitations	Evaluation
Students will learn about the different researchers	Students will look at the methods used by the researchers	Students will consider the different research methods and their strengths	Students will look at the different research methods and consider the limitations of the research	Students will evaluate the different aspects and make a conclusion
